

Malathy Venkiteswaran

Power BI Portfolio | Business and Data Analyst

Hoofddorp, Netherlands · 0633943904 · malathy1312@hotmail.com · linkedin.com/in/malathyv

ABOUT THIS PORTFOLIO

This portfolio demonstrates end-to-end Power BI capability: data modelling across multiple tables, advanced DAX measures, interactive dashboards, and executive-level reporting. Built independently on the AdventureWorks business intelligence dataset covering sales, products, customers, and returns across multiple countries and years.

Second project available on request: A dashboard built on real CBS StatLine open data analysing Netherlands construction cost inflation 2015–2024 — sector breakdowns, pipeline health, and forecast variance. The same skills applied to a genuine business question with publicly sourced data.

SKILLS DEMONSTRATED

Power BI	Dashboard design, KPI cards, trend lines, slicers, bookmarks, drill-through, navigation
DAX	Revenue, profit, return rate, adjusted profit, what-if parameters, ranking logic
Data modelling	Multi-table star schema, date tables, product and customer hierarchies
Visualisation	Line charts, bar charts, map visuals, gauge charts, donut charts, matrix tables
Interactivity	Cross-filtering, drill-through pages, dynamic metric selection, auto-generated summaries
Reporting	Executive summary, geographic view, product detail, customer segmentation

BACKGROUND

With 10+ years of experience managing and interpreting complex datasets across large-scale engineering and construction projects, I bring strong analytical foundations into a dedicated analytics career. My daily work involved identifying data quality issues, building structured reporting workflows, coordinating data across disciplines, and translating technical findings into clear insights for non-technical stakeholders, the core of what a business or data analyst does.

Full rights to work in the Netherlands. Dutch B1, 6+ years of daily workplace use.

Page 1 — Executive Dashboard

High-level performance overview with four headline KPIs: revenue (\$24.9M), profit (\$10.5M), orders (25.2K), and return rate (2.2%). Revenue trend line with forecast, orders by product category, top 10 products matrix ranked by orders/revenue/return rate, and month-on-month KPI snapshots.

KPI cards · revenue trend with forecast · top 10 products matrix · month-on-month comparisons

KPI cards	Revenue, profit, orders, return rate with MoM delta indicators
Line chart	Revenue trending 2020–2022 with dashed forecast line
Bar chart	Orders by product category (Accessories, Bikes, Clothing)
Matrix table	Top 10 products ranked by orders, revenue, and return %

Page 2 — Geographic Sales Map

Interactive map visual showing order volume across six markets: US, Canada, UK, France, Germany, and Australia. Bubble size scales with order volume. Regional filter buttons (Europe, North America, Pacific) enable instant geographic benchmarking.

Bubble size = order volume · regional filter buttons · interactive map visual

Map visual	Bubble map with country-level data, bubble size encoding order volume
Bookmarks	Regional filter buttons for Europe, North America, and Pacific
Cross-filtering	Region selection filters all visuals on the page simultaneously

Page 3 — Product Detail (Drill-Through)

Drill-through page for in-depth analysis of any individual product. Gauge charts for monthly orders, revenue, and profit versus target. A dynamic price adjustment slider uses DAX what-if parameters to model adjusted profit scenarios in real time. Includes an auto-generated plain-language report summary.

Gauge charts vs target · DAX what-if price slider · auto-generated insight summary

Drill-through	Right-click any product on the Executive Dashboard to drill into this page
Gauge charts	Monthly orders, revenue, and profit displayed vs target threshold
What-if parameter	DAX price adjustment slider models adjusted profit in real time
Smart narrative	Auto-generated plain-language summary of product performance

Page 4 — Customer Detail

Customer analytics covering 17.4K unique customers with average revenue per customer of €1,431. Revenue trends over time, orders segmented by income level and occupation, top 100 customers ranked by revenue, and an auto-highlighted top customer card. Demonstrates customer segmentation, ranking logic, and interactive filtering.

Segmentation by income and occupation · top 100 customer ranking · dynamic year slicer

Segmentation	Orders broken down by income level (Low/Average/High) and occupation
Ranking table	Top 100 customers ranked by total revenue with order count
Dynamic card	Auto-highlighted top customer updates with year slicer selection
Year slicer	Filter all visuals by year (2020, 2021, 2022)
